

Rearrange Array elements (twist not even length)

```
class Solution {
    public int[] rearrangeArray(int[] nums) {
        List<Integer> pos = new ArrayList<>();
        List<Integer> neg = new ArrayList<>();

        for (int num : nums) {
            if (num >= 0) pos.add(num);
            else neg.add(num);
        }

        int[] ans = new int[nums.length];
        int i = 0, p = 0, n = 0;

        while (p < pos.size() && n < neg.size()) {
            ans[i++] = pos.get(p++);
            ans[i++] = neg.get(n++);
        }

        while (p < pos.size()) ans[i++] = pos.get(p++);
        while (n < neg.size()) ans[i++] = neg.get(n++);

        return ans;
    }
}
```
